

JTPs

A job ticket processor (JTP) is a software program that performs a specific processing step to help process a job ticket. Each JTP has a unique name, and there is a JTP for each kind of processing step that can be performed in the Prinergy Evo system.

There are two main groups of JTPs:

- Refine JTPs, which perform steps related to converting files into safe, reliable PDF
- Output JTPs, which perform steps related to outputting proofs, film, or plates

The Prinergy Evo system manages the distribution of these JTP system pools.

JTP status displays your licensed and installed JTPs and their status.

JTPs can be added only if you have additional JTP licenses. You can only remove your additional JTP licenses. You cannot remove your basic JTP license.
