

Administering Dashboard

By default, Dashboard shows the job status only from the primary Prinerger server. Using DashboardAdmin, you can specify additional Prinerger servers for Dashboard to monitor.

1. Go to `http://<Prinerger server name>/Dashboard/DashboardAdmin.html`, where `<Prinerger server name>` is the name of the Prinerger primary server.
2. Enter your user name and password, and click **Login**.
3. Add or delete the servers that Dashboard monitors:

To	Do This
Add a Prinerger server	In the text box at the bottom, type the Prinerger server name, and click  .
Delete a Prinerger server	In the Dashboard Servers list, select a Prinerger server, and click  .

4. If `(offline)` appears after the server name, the server might be down, running a different version of Prinerger, or inaccessible—for example, due to access rights.
