Fixed bugs in Prinergy Workflow 8.1.1

This section lists bugs that are resolved in this release.

Referenced PR ID	Description
PRINERGY-31542	Separation black object's overprint state is changed from OPM=1 to OPM=0 when converted to DeviceCMYK.
PRINERGY-33186	In some cases the Printer JTP is not aborting correctly.
PRINERGY-34261	Objects are missing in refined subpages generated from layered PDFs.
PRINERGY-34532	Dynamic port range used for installation on Windows 2012 R2 restores to Windows 2008 R2 value restrictions.
PRINERGY-39986	Refine processes may begin to fail when a particular set of files is submitted multiple times.
PRINERGY-41561	Rule sets that reference variables with spaces in their name cannot be compiled.
PRINERGY-42318	Workshop client installation start window displays a second time at completion of installation on Mac OS X.
PRINERGY-42384	Spot color names with accented characters appear incorrect in the Page Colors column.
PRINERGY-42481	Page geometry should rotate with page for Publish to PDF.
PRINERGY-42519	Screen angles output incorrectly when outputting the base and a subset of versions in an LPV job.
PRINERGY-42623	DoubleTake 7.1 configuration script does not prompt the user to provide the correct administrator account to use.
PRINERGY-42726	Registry option to set Overprint Handling to ignore traps causes traps to render incorrectly.
PRINERGY-42762	Unable to view or add job notes in Prinergy Dashboard in some cases.
PRINERGY-42804	Job Manager does not refresh when page level Boolean custom fields are set to False.
PRINERGY-43035	Process Template Editor incorrectly attempts to validate Device Output Medium for non-direct connection (aka non-GDAPI) devices.
PRINERGY-43334	Trapping is being applied incorrectly to spot color blend fill objects defined as "Opaque Ignore".

PRINERGY-43385	Text-based variables (such as $[color], $[jobname], and so on) are no longer replaced when used in output device paths.
PRINERGY-43433	SMB2 is being enabled on 2008 R2 servers when upgrading to Prinergy Workflow 8.0.
PRINERGY-43544	Using a web Growth profile with rotation in the Process Template can cause a crash in the Printer JTP.
PRINERGY-43579	Improve ink eater mark performance.
PRINERGY-43604	Variable text marks used in a page output to vector PDF can result in some spot colors displaying as rich black (100% CMYK) in Acrobat.
PRINERGY-43613	Optimize settings remain unavailable when Preflight is not selected and Advanced Preflight is selected in Process Template Editor.
PRINERGY-43665	Prinergy upgrades overwrites RBA Process Template Overrides enabled by customers.
PRINERGY-43743	Refining layered PDF results in missing layers in the refined subpage.
PRINERGY-43852	Prinergy 7.5 tic mark is missing a feature that populates a custom field after the first output with the colors that subsequent output should use.
PRINERGY-43854	Intermittent issue with specific text disappearing when processed with the Trap Editor plugin.
PRINERGY-43889	Workshop Client may lock up when large multi-surface Cut & Stack impositions are output or history related to them is reviewed.
PRINERGY-43939	Workshop performance issues on macOS Sierra (10.12).
PRINERGY-44063	Workshop installer does not provide the option to perform a direct upgrade.
PRINERGY-44095	Problems copying some jobs after upgrading to Prinergy 8.
PRINERGY-44113	Output Process Template Screening Info settings revert to default settings when changing the selected Printer JTP.
PRINERGY-44120	Job does not appear to move to group correctly when performing search, change name, or move to group.
PRINERGY-44188	Nchannel shading object causes color shift in transparent objects below it.
PRINERGY-44189	Import Preps job fails when -OUTPUT_PS_MARKSFLATS_FOR_PDF:NO is set in Preps Profile referenced in import template.
PRINERGY-44190	Unable to create a new imposition based on a Preps 7.x Job.

PRINERGY-44191	Precheck errors on PLAS license check step.
PRINERGY-44192	Thumbnail creation fails if job name contains special characters (Ã¤, Ã¶ or Ã¼). Regression from 7.0 (Adobe case 47112).
PRINERGY-44199	Surface proof RBA rule hangs when specific custom DLLs are installed.
PRINERGY-44229	Color Matcher crashes shortly after changing ICC internal table to adjust LAB white color.
PRINERGY-44287	Color Library color list can become corrupted in Workshop display.
PRINERGY-44564	Daily backup intermittently fsils to run.
PRINERGY-44634	Precheck errors on PLAS license check step.
PRINERGY-44635	Imposed output fails when text mark includes Japanese characters that are not embedded.
PRINERGY-44642	$[Barcode128BPage_Code_1] line width does not honor scaling from iCut.
PRINERGY-44679	Temporary files generated from Normalizer consume hard drive space.
PRINERGY-44680	Layered Esko PDF input files have elements missing after 1st Refine.
PRINERGY-44681	Large temporary file created by the Marks JTP when using an Ink Eater mark.
PRINERGY-44691	RBA's Log To History action is unable to log to System history.
PRINERGY-44936	ColorFlow enabled output fails if the surface contains unassigned page(s) and the $[ColorSetupName] variable mark is used.
PRINERGY-44960	Output processes that "Need Attention" should be moved to On Hold queue.
PRINERGY-44963	When using Preflight Plus the temporary PDF is left in Subpages working folder when the profile is run on normalized file.
PRINERGY-45025	Overprint Handling causes dark gray boxes to appear in drop shadow areas.
PRINERGY-45220	The content stream of PDF files with a large number of clipping paths can geometrically increase in size (for example from 3 MB to 2 GB) and affect process performance.
