

# New features and enhancements in Prinergy Evo Workflow 6.1.x

## 6.1.x

### Prinergy Evo Workflow 6.1.3

This version provides bug fixes.

### Prinergy Evo Workflow 6.1.2

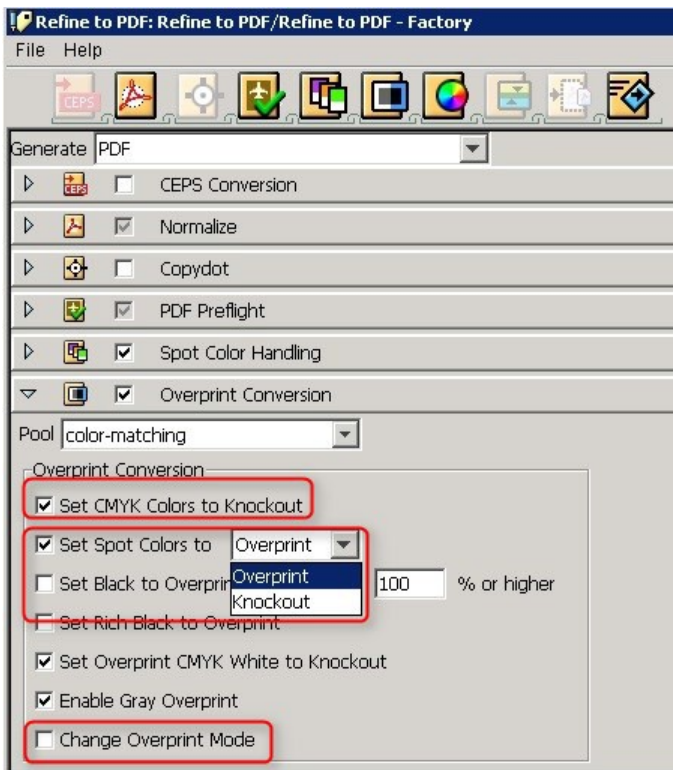

#### Floating licenses for Pandora 4.0

Prinergy Evo Workflow 6.1.2 supports floating licenses for the Kodak Pandora 4.0 step-and-repeat software.

### Prinergy Evo Workflow 6.1.0

#### Selectively overprint all spot colors and knock out process colors (EVO-6452)

Overprint conversion options available in refine to PDF process templates have been enhanced.

#### Set CMYK Colors to Knockout

Select this check box to override the overprint setting in the input file and force CMYK process colors to knock out. As a result, color printing order affects which separations are knocked out, including spot colors. Use this feature for disabling overprint and enabling content color matching for all objects on a PDF page.

#### Set Spot Colors to

Select this check box to override the overprint settings in the input file and force spot colors to either overprint or knock out.

- Select Overprint from the list to force all spot colors to overprint and knock out other colors.
- Select Knockout to force spot colors to knock out. The color printing order affects which separation is knocked out.

**Change Overprint Mode**

This check box was formerly called Enable CMYK Overprint. Select it to force CMYK objects to overprint.

**Custom file naming is available in the refine process template (EVO-2158, previously JCOX-0429)**

This new feature allows you to use custom file naming when you re- refine for a special purpose so that you can easily identify the secondary files.

In the refine to PDF process template, select **File Delivery > Use Custom File Naming**.
