Welcome to InSite Creative Workflow

Kodak InSite Creative Workflow is software that supports content creation and management.
InSite Creative Workflow consists of two software features:

- Projects (formerly presented as InSite Creative Workflow feature): A server-based collaboration and approval system that is designed to support content creation
- Libraries (formerly presented as InSite Asset Library feature): A server-based solution for the management of digital assets that is designed to support registering, locating, and repurposing of images, content, and artwork.

Projects and Libraries features are installed at the same time, using the same installer.
