

Smart layouts

You can use the Smart Layout feature to create ganged layouts intelligently using color sorting technology. You can also build Smart Layouts by populating the fields for product quantities, grain direction, step angle, priority, and bleed settings with values from an imported Excel CSV file.

Note: The Smart Layout feature currently has these limitations:

- If you are using Smart Layout in standalone mode (not with Prinergy Workflow), multi-page PDF files are not supported.
- Only single-sided layouts are supported. At this time, two-sided layouts are not supported.

See [Creating a Smart Layout](#).
