

Online Print Solutions (OPS) and Prinergy Version 5.3 User Guide

Online Print Solutions (OPS) is integrated with Prinergy through an RBA data model, whose purpose is to automate the processing of orders received from an OPS web site, and the posting of each order's status back to the web site for customer viewing.

Prinergy 5.3 includes version 2.2 of the OPS Data Model, which currently supports OPS versions 12.1, 12.2, and 12.3.

The information and configuration details provided in this User Guide were written to ensure that the customer understands, and has helpful information to accomplish, the setup and configuration tasks that the customer is responsible for completing and maintaining.
