

Organizing your process templates into groups

Process template groups for output PDF and output imposition are usually grouped by output device type. For example, Kodak Trendsetter Spectrum digital halftone proofer or Kodak Iris 43 Wide proofer.

Refine to PDF template groups are usually grouped by process type. For example, spot to color, Normalize, and OPI.

1. In the Process Viewer window, from the **Configure** menu, select **Process Templates**.
2. In the Process Template Editor dialog box, from the **File** menu, select **New Process Template Group**.
3. In the folder tree, select the new folder and type the name of the new group.
4. Press **Return** (Mac) or **Enter** (Windows).
