

Creating multiple color input versions

You can create multiple versions of the conversion for a color input. You can give each input version a name and select one version as the default for Prinergy refine. In Prinergy, you can choose the desired version from a dropdown list in **Prinergy Refine Process Templates** dialog box.

1. In the **Color Setups** viewer, click the **Conversion** icon  between the CI and the PCO.
2. In the **Conversion Edit** dialog box, click the **Edit** icon  next to the **Input Version** drop-down list.
3. Click the **Add** button .
4. [Define a new color input.](#)
