

Color Output dialog box

Page Color

Lists all the colors found in the selected pages.

When a spot color is found in the selected color libraries, a sample color swatch appears to the left of the color name. If the spot color is an exception, it is named **Otherwise** and a warning icon  appears to the left of the color name.

After your first refine, you can redefine the Otherwise entries as spot colors in your color database, or redefine them as Convert to Process. After you perform the second refine, all the previous exceptions noted as Otherwise should be eliminated.

Output

Lists the color output treatment you have specified for each color in the **Page Color** list.

Output

This column specifies how you want Prinergy to output each color. After you select one or more colors in the **Page Color** column, the list displays the following options:

- **Output**—outputs the color as specified.
- **Do Not Output**—suppresses output of the color.
- **Convert to Process**—converts a spot color to process color on output using the color recipe found in the selected color libraries. This option is available only for spot colors in composite PDF pages.

Color Information

Displays the color definition information for the color you selected in the **Page Color** column.

Add

Select this button to add a copy of the color definition.
This button is available only when you select an undefined color.

Note: Factory spot colors cannot be edited.

Edit

Select this button to edit the color definition.
This button appears when you select a color defined in the **Job** tab.

Note: Factory spot colors cannot be edited.

Edit Copy

Select to edit a copy of the color definition. This button creates a copy of a global color in the **Job** tab of the color library.

This button appears when you select a color defined in the **Global** tab.

Note: Factory spot colors cannot be edited.
