

The iPad application—overview

The Kodak InSite iPad application was developed to enable InSite Prepress Portal users to review, annotate, approve, or reject pages, directly from their iPad in portrait or landscape orientation, with no need for a standard browser.

The pages that the users are reviewing on the InSite iPad application are the same pages that they would be viewing via the web browser. All comments are displayed both in Smart Review and on the History tab of InSite.

The InSite iPad 9.1 application can be downloaded from the App Store. You can use the InSite iPad 9.1 application only with iOS 11 or later. If you are running an older iOS, upgrade to iOS 11. The InSite iPad 9.1 application works with InSite Prepress Portal 8.0, 9.0, 9.1, and 9.1.1.
