Activity 7: Build a refine process template

Who should complete this activity

- Prepress operators

- System administrators

Why you should complete this activity

A process template is required for every process executed in a Prinergy Evo workflow. This activity introduces you to building process templates in Prinergy Evo. It highlights the options available when building an refine process template using the Process Template Editor.

Recommended reading

Prinergy Evo Workflow Client user guide for your version of Prinergy Evo Workflow software. Search for:

- What are my default process templates
- Refining input files

Time required to complete this activity

15-20 minutes

What you'll learn

You will learn how to build a refine process template using the Process Template Editor. The refine process template will be used to refine a supplied PostScript file. You will use the **File** menu to submit a PostScript file for output to PDF.

What you'll need

In the location to which you extracted the activity files, find the **Activity 07** folder and this file: `Maine Flyer.ps`

What you'll do

You will create a new folder where a refine-to-PDF process template can send processed files. You will then use the Process Template Editor to create a new refine process template and use the new process template to refine a supplied PostScript file to PDF.
