

Output a single Postscript flat

1. Start the **Prinerger Evo Process Template Editor**.
2. In the **Process Template Editor**, from the **File** menu, select **New Output from PostScript Template**.
3. In the new process template, in the **Output To** list, select **Virtual Proof**.
4. Expand the **File Delivery** area of the process template.
5. In the **Processed File Location** area, select **Send Processed Files to**, then type: `.\VPS`.
Prinerger Evo will automatically output the virtual printing .vps files to the **VPS** folder, which is located in the same folder as the first input file. If the **VPS** folder does not exist, Prinerger Evo will create it.
6. Expand the **Layout** area of the process template.
7. In the **Size** area, select **Cut sheet**.
8. In the **Max Width** box, type 25 (inches).
9. In the **Max Height** box, type 20 (inches).
10. In the **Layout** area, in the **Placement** area, select **Center Horizontally**.
This centers the layout along the horizontal axis of the media.
11. In the **[Shift] Along Height**, type 1 (inch).
This shifts the layout from the bottom edge of the media along the vertical axis.
12. (Optional) Configure other settings.
 - If desired, you can configure other settings for the output from Postscript process template. For example, Prinerger Evo can create Print Production Format (PPF) files and ink reports.
 - The output PostScript process template does not allow you to color manage.
13. From the **File** menu, select **Save**.
14. In the **Name** box, type `OutputPostScript-VPS`.
15. Click **Create Process Template**.
16. From the **Window** menu, select **Template Browser**.
The  icon beside **OutputPostScript-VPS** indicates that this process template will process PostScript files.
17. Drag `ReportPage.ps` from the **Activity 34** folder to the **OutputPostScript-VPS** process template in the **Template Browser**.
18. In the Process Start dialog box, in the **Job** box, type the name of the job, such as `Activity 34`.
19. Click **Go**.
20. From the **Window** menu, select **Process Viewer: View by Process**.
Prinerger Evo processes the PostScript file and outputs the .vps files.
21. Start the Prinerger Virtual Proofing System software.
22. In the **VPS** folder where you saved your output files, open all of the .vps files that you want to preview in the Prinerger Virtual Proofing System software.
