Document Inspector dialog box

Use this dialog box to review and update information about a document.

The Document Inspector dialog box displays all of the information about the document in an easy to view format. This information can also be viewed in the Digital Direct window, depending on which columns you have chosen to display using the menu option **View** > **Visible Columns** dialog box.

Some of the fields are populated with information from the job ticket. Other fields display information that was manually entered in Digital Submit or in Workshop, such as custom fields that were created at job level.

For some fields, you can edit and update information about the document. The fields that are disabled and highlighted in grey indicate that you cannot change or update the information.

Document Information

Field /Option	Description
Name	Indicates the name of the document.
Print Duration	Indicates the estimated amount of time that the document will take to print. For every document that is associated with a press, the print duration can be calculated. The print duration time is only an estimate and does not account for start up, paper jams or binding.
State	Indicates the current status of the document: ready to print, planned, on press, post press, completed or removed.
Print Status	Indicates if the print run was successful or ended in error.

Content File Details

This section lists all of the information that is known about the input file.

Field /Option	Description
Job Name	Indicates the name of the document.
No. Pages	Indicates the number of pages in the document.

Booklets	This field relates to variable data print and indicates the number of booklets that will be printed during a print run. Each version that is going to be printed from a VDP file is also known as a record.
Creation Time	Indicates the time the document was created.
Content File Kind	Indicates the file format of the document. For example, the format may be PDF, PostScript or PPML/VDX.
Purged	Indicates if the document has been purged from the system. Indicates the status of the document in the Prinergy Archiver. Prinergy keeps a record about all jobs/documents in the database. If you erase a document from the system, you can still browse through the database to retrieve it.
File Names	Indicates the file name of the document. This may be different from the job name.

Production Information

Field/Option	Description
Print by	Indicates the date the document needs to be printed by.
Ship by	Indicates the date the document needs to be shipped by.
Due by	Indicates the date the customer needs to receive the document.
Surfaces	Indicates the number of surfaces.
Print Quantity	Indicates the number of copies that will be printed.
Pages per surface	Indicates the number of pages per surface. This field is used for calculating how long the document will take to print. You can type the number of pages per surface or the field may be populated by the JDF ticket.
Duplexing	Indicates if the document is set to print for duplexing.

Print Status

Field/Option	Description
Submission Time	Indicates the time the document was submitted to print.
Sheets Output	Indicates the number of sheets used for output.

On Press	Indicates if the document is on the press.

Order Information

This section lists the information that you entered when you created the job using Digital Submit.

Field/Option	Description
Customer	Indicates the customer name.
Product Name	Indicates the type of document, such as booklet or business cards.
Order Quantity	Indicates the quantity the customer ordered.
Shipping Method	Indicates the shipping method that should be used.
Address, Country and Postal Code	Indicates the customer's delivery address.

Media Information

This section lists information about the media, which affects how long the document will take to print.

Field/Option	Description
Body Media Name	Indicates the body media name.
Body Media Color	Indicates the body media color.
Body Media Coating	Indicates the body media coating.
Body Media Weight	Indicates the body media weight.
Body Paper	Indicates the type of body paper.
Length	Indicates the length of the media.
Width	Indicates the width of the media.
Media Names	Indicates the name of the media that is being used to print the document.

Press Settings

Field/Option	Description
Target Press	Indicates the press that is used to print the document.
Target Press Queue	Indicates if a press queue has been selected for the press.
Print Settings Format	Indicates the print settings that are used.

Custom Fields

If custom fields have been set up in Workshop at job level, they are displayed in this section.
