Configuring Point to Site Connections for Kodak Managed Services

Overview

A Point-to-Site (P2S) VPN gateway connection lets you create a secure connection to your virtual network from an individual client computer. It offers a secure, client-initiated way for customers to access their Prinergy system running on an Azure VM.

Prerequisites

Point-to-site gateway configured with:

- tunnel type of IKEv2 and OpenVPN (SSL)
- SKU of VpnGw1 or better

Please open a support call with Kodak if you need assistance with setting up a point to site connection. Additional information can be found on the Partner Place website (partnerplace.kodak.com). Authenticated customers can log in and find the instructions by searching for answer ID 76120.
