

# Updating Workshop on the client

You can automatically update Workshop with the Prinerger Installer Wizard when you start the Workshop software. This provides you with updates for existing features. If you want to install new software (for example, Prinerger Digital Submit or Prinerger Digital Direct), you must run the Prinerger Installer Wizard from the shared folder on the server.

## Requirements:

- Quit other software, such as Prinerger VPS or Preps.
- On computers running Mac OS X, you must have an administrator password to update Workshop. For more information, contact your system administrator.

Perform this procedure on all workstations after the servers have been upgraded.

1. To start Workshop, type your user name and password, and click **Login**.  
If the number beside **Workshop Version** is different than the number beside **Server Version**, the Workshop updating process is triggered automatically. If the two numbers are the same, Workshop starts normally.
2. In the Synchronize Workshop dialog box, click **Yes**.  
If you click **No**, you cannot log on to Workshop.
3. On a computer running Mac OS X, perform the following actions:
  - a. In the Prinerger Workshop dialog box, click the **lock** icon.
  - b. In the Authenticate dialog box, in the **Password** box, type the administrator password.
  - c. Click **OK**.
4. Follow the instructions in the wizard to update the software.  
The system installs the latest version of Workshop.
5. When the installation is complete, click **Done**.  
Workshop starts automatically.
