

Removing a job from the queue

When you delete a job from any of the Device Track queues, the job is deleted from the device and therefore is no longer displayed in Device Track. The job is not deleted from Workshop's Job Finder.

Note: You cannot delete a job object when it is being processed.

1. In any of the queues, select the job that you want to delete, and click  (located in the top-right corner above the list of jobs in the queue), or right-click the job.

Note: You can select multiple jobs by holding down the **Ctrl** key while selecting the jobs to be removed from the queue.

2. From the menu that appears, select **Remove From Queue**.
3. In the confirmation dialog box, click **Remove**.

The job is removed from the Device Track queue, and from the device queue. It is not deleted from Job Finder.
