Modifying attribute values

You can modify the attributes of a project, a library, an element, a folder, and a task. You cannot modify the task element attribute, System attribute and XMP attribute metadata of an element.

When modifying element attributes and when an element has multiple revisions, you can modify the attribute values for the latest revision only.

1. To modify User Defined attributes, perform one of the following actions:

To	Do this
Modify project attributes	Select a project and select **Project** > **View Project Attributes** or click **Edit** in the inspector view.
Modify library attributes	Select a library and select **Library** > **View Library Attributes** or click **Edit** in the inspector view.
Modify element attributes	Select an element and select **Element** > **View Element Attributes** or click **Edit** in the inspector view.
Modify folder attributes	Select a folder and select **Folder** > **View Folder Attributes** or click **Edit** in the inspector view.
Modify task attributes	Select a task and select **Task** > **View Task Attributes** or click **Edit** in the inspector view.

A list of attributes appears.
If you select multiple elements to modify element attributes, attribute values appear as *different* wherever the values vary among elements.
2. Click **Update**.
