

Working with project or library groups

You can group projects and libraries for a specific customer. Project and library groups add an extra organizational level to your files, between the customer level and the project and library levels.

You might create a group for one of your clients, and then place all of the projects for that client inside the group.

Important: When you delete a project group or library group, all projects or libraries in that group are deleted.

1. Perform the following actions:

To perform this action	Do this
Enable project and library groups	<ol style="list-style-type: none">a. Select a customer.b. In the lower pane, click the customer name.c. In the Edit Customer Information dialog box that appears, select the Enable project/library groups for customer check box.d. Click Update.
