## Editing tints in a plate curve

You can adjust the measured tint densities on plate after some changes have occurred to a plate line in an existing plate setup.

**Note**: You must have imaged a plate control strip using this particular combination of device type, plate type, screening, and plate line.

- 1. Click the **Plate Curves** tab.
- 2. Click the plate curve that you want to remeasure.
- 3. In the **Data** panel on the right, in the **Measured Plate Response** section, click the desired **Tint In** row and enter the measured plate response.
- 4. To modify the **Tint In** values, click **Tint Set** and make your changes.
- 5. Click **Apply**.
