

# Configuring Site to Site Connections for Kodak Managed Services

A Site-to-Site VPN gateway connection is used to connect your on-premises network to an Azure virtual network over an IPsec/IKE (IKEv1 or IKEv2) VPN tunnel. You will need to use your Firewall device to configure a Site-To-Site VPN.

Please open a support call with Kodak if you need assistance with setting up a site-to-site connection.

Instructions for configuring a point to site connection are available on the Partner Place website ([partnerplace.kodak.com](https://partnerplace.kodak.com)). Authenticated customers can log in and find the instructions by searching for answer ID 76121.
