Configuring Just in time (JIT) Access of Kodak Managed Services

Kodak uses Microsoft Defender for Cloud's just-in-time (JIT) access to protect your Azure virtual machines (VMs) from unauthorized network access. JIT lets you control access to your VMs when the access is needed, on the specific ports needed, and for the period of time you specify.

Please open a support call with Kodak if you need assistance with configuring JIT. Instructions are available on the Partner Place website (partnerplace.kodak.com). Authenticated customers can log in and find the instructions by searching for answer ID 76119.
