

Activity 6: Create a Double-Sided Die Template

Who should complete this activity

This activity should be completed by anyone who plans to use Pandora regularly.

Why you should complete this activity

To create layouts that print double-sided, Pandora can use the same die file for both the front and the back layouts by automatically mirroring the CAD die file. This activity will introduce you to the procedures involved in creating a two-sided layout in standalone Pandora.

In the first objective, you will create a sheetwise double-sided layout. In the second, you will create a perfector double-sided layout. For this activity, the fronts of the layouts contain the packaging artwork (outside of a box or label), and the backs of the layouts (inside of the box or label) contains information on obtaining recipes.
