

Objective 4—Add Marks to the regional versioning job

1. If it is not already open, open the **Marks** palette.
2. Open the SmartMarks folder, locate the mark named `CB_6-color_2-tier.pdf`, and click the mark to preview it.

3. Drag the `CB_6-color_2-tier.pdf` mark anywhere in the layout. Because the mark is a SmartMark, it automatically positions itself on the substrate.

4. Close the **Marks** palette.
