Marks

All marks that you can create and add to press runs are based on the Kodak SmartMarks software technology. Each mark is dynamically placed and sized, based on the positioning rules that you configure and store in its SMK file. You can create text, line, rectangle, crop, fold, collation, and custom SmartMarks and groups, and you can also set preferences for built-in side guide and center sheet marks. The Preps 7.0 software includes two new SmartMarks: bearer bars and micro dots.
