Changing environment

To enable a rule set in a specific job, change the environment to the job environment. To enable a rule set system-wide, change the environment to system.

1. Open Rule Set Manager in Job Finder or Job Manager.
2. Click the **Change Environment** button.
3. In the Change Rule Set Manager Environment dialog box, do one of the following:
   - To enable a rule set system-wide, select **System Environment**.
   - To enable a rule set in a job, select **Job Environment**, and click **Browse** to select the job.
4. Click **Change Environment**.

You can now enable rule sets in the selected environment.
