

# About the layout of rule sets

As you drag icons onto the workspace to build the rule set, RBA automatically arranges them. You can move the icons around to customize the layout. When you save the rule set, your layout is saved.

You can control the arrangement of icons in the following ways:

To do this	Select
Arrange the icons optimally, one time only	Select <b>View &gt; Arrange Now</b> If you then move the icons or add new actions or events, the optimal layout is not preserved.
Turn off automatic layout	Select <b>View &gt; Auto Arrange &gt; Off</b> Each time that you add new actions or events, you arrange the layout of the icons. Your layout is preserved.
Lay out the icons on a grid	Select <b>View &gt; Auto Arrange &gt; Snap to Grid</b> Each time that you add new actions or events, RBA centers the icons (not the text) on grid intersections.
Turn on automatic layout	Select <b>View &gt; Auto Arrange &gt; Full</b> Each time that you add new actions or events, RBA arranges the icons optimally.
