# Refining input files

You can add a **Refine Input File** action to a rule to automatically refine input files after the input files are added to a job.

1. Open Rule Set Manager, and click **New Rule Set**.
2. On the **Events** tab, in **Prinergy Events** > **Input File Events**, drag **Input File Added** to the workspace.
3. On the **Actions** tab, in **Prinergy Actions** > **Input File Actions**, drag **Refine Input File** to the **Action** icon.
4. Double-click the line between the event and action, set the parameters, and click **OK**.
5. Save, close, enable, and test the rule set.
