

Sample: Custom field for trapping jobs

You can use a custom field to control whether trapping is done during refining.

What the rule does

The rule sends:

- Pages that need trapping to a refine process that uses a process template with trapping enabled
- Pages that don't need trapping directly to print

Why it is useful

The rule reduces the number of refine processes.

Events and actions used

Event	Flow	Actions
Input File Added	Filter Items	Refine Input File Refine Page Perform Loose Page Output

Tip: In Rule Builder, you can search for a specific event or action by clicking anywhere on the **Events**, **Flow**, or **Actions** tabs, and typing the name.

Key parameters

Event or action	Parameter
Filter Items	Select items where: Select the Trap custom field and the value of True .
Refine Page	Process Template Path: Select a process template that has trapping enabled.

Perform Loose Page Output	Process Template Path: Select a process template that doesn't have trapping enabled.
------------------------------	---

Where to enable it

You can enable this rule either in specific jobs or across the system.

Other considerations

In Workshop, create a Boolean page custom field called Trap.
