

Prinerger Workflow to EFI Digital StoreFront (DSF) integration

Introduction

Prinerger Workflow integrates with EFI's Digital StoreFront (DSF) via JDF using the Business Link and RBA components of Prinerger. The integration (SD-1416) enables the automated creation of Prinerger jobs, as well as the retrieval and automatic adding of input files that are received via DSF. The required components are installed and configured remotely by a trained Kodak representative.

Prerequisites

- Prinerger Workflow 6.1.0 or later with Rules-Based Automation and Business Link 3.0.8 or later
- EFI Digital StoreFront (DSF) version 5.1 or later with JDF integration to non Fiery devices (already installed and configured)
