## **Creating a label mark using Adobe Illustrator**

## Create the label mark

This procedure summarizes the steps for creating a label mark. Use the help files for your version of Adobe Illustrator to confirm where in the user interface you can perform each step.

Create the mark	In this example, create a mark with a variable that is replaced with the computer's system time:  Create an insertion point on the artboard and then type: Time: <time> Note: The text between the brackets is case-sensitive. It must be capitalized as shown.</time>
Set the kerning and tracking	This step ensures that the text appears correctly in the final output:  With all the text selected, find the <b>Character</b> palette and set the kerning and tracking values to 0.
Set the page size	This step ensures that the mark can accommodate the text that Pandora fills in for the variable:  Find the Document Setup dialog box, select <b>Artboard</b> , and type the desired mark dimensions in the <b>Width</b> and <b>Height</b> boxes.
Set the ruler origin point	This step ensures that the mark outputs correctly on a Prinergy system:  Reposition the text mark on the artboard so that it is flush with the left edge, select <b>Show Rulers</b> , and double-click the upper-left corner where the rulers intersect.
Delete styles and colors from the job	Remove all graphic styles, brushes, and symbols from the palette and delete all colors in the job other than <b>White</b> and <b>Registration</b> .  • In the <b>Swatches</b> tab, select all the swatches except <b>White</b> and <b>Registration</b> , click the trash can, and confirm the deletion.  • Repeat in the <b>Graphic Styles</b> , <b>Brushes</b> , and <b>Symbols</b> palettes.
Change the White swatch to Registration	Double-click the white swatch, and, in the <b>Swatch Name</b> box, type Registration. Do not use the default Registration color swatch. Pandora does not interpret this as a registration color.  In the <b>Color Type</b> box, select <b>Spot Color</b> .  In the <b>Color Mode</b> area, in the <b>C</b> , <b>M</b> , <b>Y</b> , and <b>K</b> boxes, type 100.
Change the text to Registration	Select the <b>Text</b> tool, select the text you created (Time: <time>), and click the <b>Registration</b> swatch.</time>
