

Resolving bleed overlaps between rectangular work

If the bleeds of rectangular artwork overlap, you can resolve them automatically. You do not need to select the artworks.

- Select **Object > Resolve Rectangular Bleeds**.

Tip: If you set the **Nudge** distance in **Preferences** under **Measurements** to the same size as your **Bleed margins** preference, you can use the **Bleed** tool to select a bleed line, and use the arrow keys to set the bleeds.

The automatic bleed resolution feature only works for rectangular bleeds.
