_verification report limitation

Limitations: in the current release, the following Verification reports are not accurate and it's recommended that you do not use them until the problem is fixed:

- Comparison of the measured SCO verification to the PCO, except when the PCO is a CMYK Reference or PDF/X Output Intent
- Comparison of the measured print calibration curve verification run to Calibrated Output Predicted Response
- Comparison of the measured PCO verification run to PCO Predicted Response
- Comparison of the measured SCO verification run to SCO Predicted Response
- Comparison of the print calibration curve predicted response to the target response
