

Adding messages to Prinerger Diagnostics

For troubleshooting, it can be helpful to have a message appear in Prinerger Diagnostics that describes the problem. You can use custom code to add messages to Prinerger Diagnostics.

You can add a message using the following code:

```
'This function writes the message Please resend the job. to Diag  
Creo.PWS.Automation.LowLevelUtilities.DiagMessage.LogMessage( _  
System.Diagnostics.TraceLevel.Info, " Please resend the job. ")
```
