Setting die line and varnish colors

1. (Optional) Add a color for the die line or varnish to the Global tab of Color Editor with a name such as Die or Varn.
   a. Set the Opacity of a die line color to die line.
   b. Set the Opacity of a varnish color to Transparent.

   This step is optional because you can also add the color while you refine in Step 4.
2. Refine the pages where you want to use the die line or varnish by starting a refine process template on the pages.
3. In the Start Process dialog box, click Color Mapping.

   The Color Mapping dialog box opens.
4. In the Color Mapping dialog box, perform one of the following actions:

If the Die or Varn Color	Do This
Is listed as a color	Use the color as a die line or varnish.
Is not listed as a color	a. Add a color for the die line or varnish to the Global tab of Color Editor with a name such as Die or Varn. b. Set the Opacity of a die line color to die line. c. Set the Opacity of a varnish color to Transparent.
