

Commercial and Packaging mode features and functionality

The VPS+ software offer's two types of modes for the end user to work in.

Commercial mode is for general commercial and digital print for previewing files before print. This mode does not offer the full functionality that the Packaging mode offers in terms of features.

Packaging mode is for Packaging (Offset, Flexo Digital), general commercial, and digital print for previewing files before print. Packaging mode allows users to gang different TIFF files together for output on a single plate.
