Prinergy VPS+ is software that displays pages/artwork and impositions/layouts in full color on the computer monitor. You can save time and money by using the Prinergy VPS+ software to find errors before plates are made.

Use the Prinergy VPS+ software to check imposition/layouts, registration, layered PDF versioning, trapping, backup, fonts, image placement, and color breaks.

Kodak VPS+ software in packaging mode provides efficient tools for arranging 1-bit TIFF files in a layout for platemaking and film imaging. Design plate layouts with output settings, and either drag image files directly to the layouts or use hot folders for automated processing and output of layouts.
