

Viewing an input file's process history

1. In the Process Viewer, select the process for which you want to view the history. To view the history of more than one process at a time, select the initial process, press and hold the Command key on a Macintosh computer, or the Ctrl key on a Windows-based computer, and select any additional processes, whose history you would like to view.
Tip: Command + A, or Ctrl + A on a Windows-based computer, selects all messages.
2. At the bottom of the Process Viewer, or from the **View** menu, select **Item History**.
3. Alternatively, in the Process Viewer, double-click the item for which you want to view the history.
