

Activity 46: Submit a Prinergy job to a digital device using JDF bi-directional connectivity

Note: This activity is relevant for version 8.1 and later.

Overview

Digital printing is a direct-to-paper printing process that creates high-quality, black-and-white, and full color documents, with a look-and-feel comparable to conventional offset printing. Essentially, digital printing uses a digital imaging process that transfers image data directly onto paper, therefore, eliminating the need of traditional offset rollers and plates and the many steps used in the conventional offset printing process.

There are a variety of workflows that can be utilized in a digital environment. In this activity, you will learn how to follow the digital workflow and submit your Kodak Prinergy job to a digital press.

What you'll need

- Make sure that you added the digital press in the Setup tool.
- The name of the Prinergy server(s)
- A user name
- A password
