

Create a preflight PDF report

1. On the **Actions** tab, locate **Create Preflight PDF Report**:
Prinergy Actions > Page Actions > Create Preflight PDF Report
2. Drag **Create Preflight PDF Report** to the resulting event icon (in the shape of a double arrow >>) next to **Refine Input File**.
3. In the list of selections, choose **Input File Refined Warn And Error**.

This attaches the **Create Preflight PDF Report** action to a **Warn + Error** status. In this case, if an input file is refined with a warning or error message, a preflight report will automatically be generated.

Note: This only works with Advanced Preflight. Preflight+ does not support this.
