

Viewing processes

Look in the **Processes** pane for information about processes, which include JTPs and daemons.

Tip: The file names of daemons appear in the **Processes** pane of Administrator and in the Task Manager dialog box in the Windows operating system.

1. In the right pane, click the **Processes** tab.

The **Processes** pane displays the following information:

Column	Describes	Possible Entries
	Status of the process (indicated by the icon color)	Green indicates the process is running. Red indicates the process has stopped.
Application	Name of process, suffixed with a Windows operating system process ID number—for example, Spool Daemon (418) .	Processes include daemons and JTPs
Server	Which server the process is running on	Any server name in your Prinergy system
Version	Version number of the process	Numeric release number plus update (if applicable), in A.B.X.Y for m, where: A.B. is the major and minor release of the product. X.Y is the major and minor update of the product. For example, 2.0.5.1 indicates Prinergy release 2.0, update 5.1.
Status	Status of the process	Running indicates the process is running on a server. Ended indicates the process is not running on a server. Terminated Abnormally indicates the process has crashed or was stopped from NT Task Manager.
Filename	Executable name of the process	Processes include daemons and JTPs.

2. If you want to sort processes by a different column, click the column heading.
For example, if you want to sort the processes by file name, click the **Filename** column
