

# Prinerger Configuration Backup

A Prinerger Configuration Backup utility is available for backing up Prinerger Workflow systems that are running on Windows Server 2016 and 2019 servers.

In Prinerger versions prior to 5.1, Prinerger Online Backup uses Windows NT Backup to back up the system files. However, NT Backup is not supported on Windows Server 2008 x64 and newer operating systems.

Prinerger Configuration Backup backs up the Prinerger and Windows configuration for each Prinerger primary and secondary server in the system to the specified paths and copies the database backup files to the same paths. Additional software configurations such as InSite Prepress Portal, InSite Creative Workflow, and Print Console that may be installed are not backed up.

	Prinerger Configuration Backup
Prinerger version	5.1 or later
Operating system	Windows Server 2008 x64 or Windows Server 2012 R2
Media	File
Backup data	<ul style="list-style-type: none"><li>• Oracle database</li><li>• Prinerger configuration</li><li>• Window configuration</li></ul>
Servers that can be backed up	Primary, secondary, and render stations
How to configure	In Prinerger Administrator, click <b>Tools &gt; Backup &gt; Settings</b> button
Backup service name	AraxiSystemBackup

In Prinerger Administrator, you configure and view the status of Prinerger Configuration Backup using **Tools > Backup**. (This dialog box has different content depending on which is set as the preferred backup option.)
