

Configuring backups with Prinerger Configuration Backup

If you use Prinerger Configuration Backup, define the servers that will be backed up and the location where the backup is created.

You can add Prinerger secondary servers and render stations to the list. You cannot add tertiary servers.

1. Click **Tools > Backup** and then click **Settings** to display the Prinerger Configuration Backup - Settings dialog box.

To	Do this
Back up the Prinerger and Windows configuration. Otherwise only the Oracle database is backed up.	Select Enable System Backup .
Specify backup locations.	Click  , and then either click Browse to select the backup location, and click OK , or enter the UNC path. Click OK .
Delete a backup location.	Select the location and click  .
Specify how many backup sets to keep.	In the Number of Backup Sets to Keep text box, enter the number of backups you want to keep.
Select which servers to back up.	In the Servers to Backup list, select the servers you want to back up. Clear any server that you don't want to back up.

2. Click **OK**.
3. Ensure the backup service uses the same user account other Prinerger services. See [Setting logon rights for the Prinerger Araxi and backup service accounts](#).

Note: Prinerger Configuration Backup uses the AraxiSystemBackup service.
