## **Connect to Canon**

Set up communication between Prinergy 9.5 and the Canon digital front end PRISMASync or EFI Fiery Server 2 via Setup. Legacy mode of Adding Connection via Prinergy Administrator is not longer supported in Prinergy 9.0 and above.

Check that Prinergy supports the software version of your digital press front end. See supported digital presses.

Give Prinergy access to the Canon digital front end so that Prinergy can track audits. On the Canon digital front end, add the user account ARAXI. The default password for the Araxi account is ARAXI.
