

Requirements

Confirm that the workstation on which you are installing the Preps software meets these system requirements:

Supported operating systems	macOS Monterey (12.0.1) Intel and M1 chips** macOS Big Sur (11.0) Intel and M1 chips macOS Catalina (10.15) Oct 1, 2023 - No Longer Supported macOS Mojave (10.14) Oct 1, 2023 - No Longer Supported macOS High Sierra (10.13) Oct 1, 2023 - No Longer Supported <hr/> Microsoft Windows 10 Pro Windows 2016 Windows 2019 Note: Windows 10 IoT is not supported
Memory	4 GB of RAM (available minimum)
Hard disk space	4 GB of available space
Screen resolution	1280 x 960 (minimum)
Qualified Anti-Virus	McAfee

Notes:

***Preps 9.0.0 in Prinerger 9 currently does not support Mac OS 11 (Big Sur). As of Preps 9.0.2, Mac OS 11 (Big Sur) is qualified.**

****The M1 processor has been tested on OS 11 and 12.0.1 for Preps 9.0.3.**

OS 12.1 has not been fully tested at this time.

We recommend deploying any OS 12 Intel and M1 Macs with caution. Consider first creating a dual boot environment or Time Machine backup.

Allow some time to ensure all software works well in your specific environment, before rolling out on a larger scale.

Please also see the Prinerger, ColorFlow, VPS+, Pandora and PLA Release notes for supported client workstations and known limitations.
