

# Viewing the progress of an input file

1. In the **Process Viewer**, click the input file process for which you want to view the progress.

The input file's JTP processing progress appears at the bottom of the Process Viewer as progress bars. For example **Normalizing** and **Optimizing**.

If there are any problems, a warning or error icon appears beside the input file process in the queue and beside the progress bars.

2. Click **Item History** for more information on process warnings or errors.
