

Ellipse Mark

Use the Ellipse Mark dialog box to specify the form of the mark.

Width (w) and **Height** (h) are indicated in the following image. Type the values for the size of the mark. You can use a formula to set the width and height. For information about the settings, see **With Step** in [Setting Ink type 2](#).

Repeat: Specify how many times to repeat the mark and, if you are using more than one, specify whether to arrange the marks vertically or horizontally. You can use a formula to set the value.

Interspace: Set the edge gap between two repeated ellipse marks. You can set the value with a formula. Positive and negative values represent the two interspace directions. The effect of the interspace setting is shown in this image:

Shift: Show the stagger effect of repeated marks.

Tint: The screen dot percentage of the ellipse mark.

Stroke: When you select the **Stroke** check box, the ellipse marks change to circles with an adjustable line-width, as shown next. The Fill image shows the effect when the **Stroke** check box is cleared.
