Preserve mark colors

The default setting for `PreserveMarkColors` is `True` in the `DefaultUser.properties` file.

This means that the color separations for your job include all the colors from your artwork and colors from your marks. For example, if you have only cyan artwork and bring in a mark that contains magenta, yellow, and a spot color, and if `PreserveMarkColors` is set to `True`, the color separations in your job will be cyan, magenta, yellow, and the spot color. (If `PreserveMarkColors` is set to `False` for this example, the color separation for this job would only be set to cyan.)
