Selecting an ICC profile version and display profile

The default ICC profile version to generate device profiles or DeviceLink profiles for Prinergy is v4. If you are generating profiles for an application that is not compatible with v4, you can change the ICC profile version to v2.

1. Perform one of the following actions:
    *   For Windows, select **File** > **Preferences**
    *   For Mac OS X, select **ColorFlow** > **Preferences**
2. Click the **ICC Profiles** tab.
3. In the **Profile Version** list, select the version that you want to use.
