_color space settings

- Total Ink Limit: Specify the maximum sum of tint values of all the inks
- **Black Start**: Specify the start point on the neutral axis for black ink. For example, if you set the start point value to 20%, tones less than 20% will print with CMY inks only
- Max Black: Specify the maximum allowable percentage of black ink used in the black separation
- **Black Strength**: Use the slider or the text box to specify the relative quantity of black vs cyan, magenta, and yellow used to generate the neutral gray component of colors. As you move the slider towards the maximum value, colors can contain more black
- For Perceptual rendering intent, you can adjust the way the source gamut is mapped to
 the destination gamut by entering the desired value in the Brightness Boost and
 Contrast Boost boxes. It's recommended that you generate the profile with default
 settings, and then adjust the Brightness Boost and Contrast Boost settings if the visual
 appearance of separated images is not pleasing
